Volume 8, no. 5, e01752-17, 2017, <https://doi.org/10.1128/mBio.01752-17>. In describing structural models for three spontaneous FK506-resistant mutants shown in Fig. 7B (SR3, SR5, and SR6), the associated text incorrectly described these as mutations of lysine rather than leucine residues. The models shown are all correct, and this error does not alter the conclusion that these mutations are predicted to affect either FKBP12 conformation or stability to result in the observed drug resistance phenotype.
